

MailGate MSP and Partner Offering

MailGate offers **best-in-class cybersecurity solutions** that protect against sophisticated cyber threats, specializing in **safeguarding highly regulated, data-sensitive sectors** like healthcare, financial services, legal, and government.

MailGate is **proven** and **market-tested since 2004**, with no known security breaches. Resell or easily host your clients, providing them peace of mind for **secure email** communications.

End-to-End Email Security

- Deliver inbound and outbound content filtering and malware/ransomware protection
- SMTP connection level management protecting against DHA and DoS attacks
- Protect against fraudulent email communication (spoofing, BEC, impersonation, phishing)
- Implement multi-layer defense at risk end-points
- Set up easy to use encrypted mail service with MFA

Robust Policy Engine

- Granular rules engine for defining custom content-based policies and message handling actions
 - Scan entire message and attachments
 - Enforce custom data management
 - Implement security protocols
 - Connect with 3rd Party DLP engines via ICAP or use out of the box DLP measure
- Serve customers in regulated and data sensitive verticals to protect their brands

Flexible Deployment Options

- Offer multi-tenant or private deployments in your data centers
 - Azure and AWS ready
 - Virtual machine appliance with clustering
 - On-premise option
- Provision unique profiles to fit customer needs

Key Features

Advanced Threat Protection

- Leading Anti-Spam and Anti-Virus protection
- Proprietary security lab for additional message inspection by MailGate engineers
- "Zero-hour" virus protection via quarantining, sandboxing, and emulation
- Link, attachment, IP, and URL evaluation

Secure Collaboration

- Encrypted sharing of sensitive data and files with no volume limits
- Enable secure folder encryption for sharing sensitive project data
- Easy to configure DLP workflows for regulatory compliance requirements
- S/MIME scanning without breaking encryption

Intuitive routing and set-up

- Easily integrate with Microsoft O365, G-Workspace, Exchange on-premise, and other platforms for best practice 2-layer protection
- Manage complex routing, SMTP relays, mass marketing mail flows, classify senders and connections

Reporting and Monitoring

- Easy to set up automated reporting
- Complete message tracking and tracing
- Real-Time data dashboard
- Export to SIEM

MailGate offers SMB and large enterprise email security solutions which aid against threats and prevent irrevocable public breaches.

How MailGate Works with MSPs and Partners

For Managed Service Provers (MSPs & MSSPs):

MailGate is an MSP-ready, multi-tenant capable product that scales to provide customer security in one environment, with a branding SDK for customized visual experiences. Integrate with SOCs to offer a comprehensive email security service solution.

For Value-Added Resellers (VARs):

MailGate allows your team to actively manage Email Security for “hands-off” customers, offering multiple branding options, APIs, and SDKs to add value to the solution. Manage the infrastructure or easy-to-use administration to support customers.

For Pass-Through Resellers:

MailGate simplifies deployment and support by allowing you to offer it to customers without service obligations, as our pre-sales and support teams handle customer interactions. Available via contract or transactional relationship.

PARTNERS - Add a multi-tenant deployment of 500 users or more and get a free company subscription of MailGate Basic for 25 users!!!
